Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Claims 3, 10 and 13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/12/06.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-7, 21-29, 31-46 are rejected under 35 U.S.C. 102(b) as being anticipated by Stewart et al. (US 2002/0111618). In figure 13a Stewart et al. disclose a probe for ablating tissue comprising an outer elongate probe (402) including a distal ablative structure (420) having an open architecture defining an interior space, a lumen extending through the outer probe body as illustrated by figure 13a, the lumen configured to slidably receive an inner elongate probe body, the lumen having an exit port as also illustrated by figure 13a out of which the inner probe body can be extended within the interior space and one or more ablative elements (420) mounted on the distal ablative structure.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3739

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8, 9, 11, 12, 14-20 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stewart et al. '618 further in view of Worley et al. (US 2004/0024425). Stewart et al. teach all of the limitations of the claims except the inner probe (408) having a distal diagnostic structure. Worley et al. teach that it is old and well known in the art to provide a diagnostic structure on the distal end of a guidewire to determine the optimal treatment site [paragraph 0037]. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a diagnostic structure on the distal end of the inner probe of Stewart et al. to provide a means of determining the optimal treatment site.

Claims 8, 9, 11, 12, 14-20 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stewart et al. '618 further in view of Samson et al. (US 5549109). Stewart et al. teach all of the limitations of the claims except the inner probe (408) having a distal diagnostic structure. Samson et al. teach that it is old and well known in the art to provide a diagnostic structure on the distal end of a guidewire to determine the optimal treatment site [paragraph 0037]. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a diagnostic structure on the distal end of the inner probe of Stewart et al. to provide a means of determining the optimal treatment site.
